PokeTeam Builder | Full stack application in production 2025 – present

pokemon-team-builder.com | github.com/ManusolJ/pokemon-backend | github.com/ManusolJ/pokemon-frontend

- Java / Spring Boot REST API with Spring Security: JWT authentication, user and admin roles, and password recovery by email.
- PostgreSQL persistence and sync of the official dataset from PokéAPI: over 127,000 records imported in about 16 minutes with zero errors.
- Angular / TypeScript frontend with Tailwind and PrimeNG: team builder, filterable information and protected routes.
- Self-hosted deployment: GitHub Actions builds the Docker image and deploys to my Linux server, exposed through Cloudflare Tunnel with no open ports.

manusoler.dev | github.com/ManusolJ/portfolio-web | github.com/ManusolJ/portfolio-api

- Bilingual Angular site served from Cloudflare, with a Spring Boot API on my own server.
- Live panel showing my services' uptime and the server's health (CPU, memory, disk), plus an SMTP contact form with spam protection.

Necobot | AI-powered Discord bot 2026 – present

github.com/ManusolJ/Necobot

- TypeScript on Sapphire and discord.js, SQLite with migrations and scheduled tasks.
- Locally hosted LLM via Ollama answering in character, with GitHub Actions CI and Docker deployment on my own server.
